

Cape Jervis Coastal Community Group: Preserving our coastal biodiversity

Did you know that the coastal area north and south of the Cape Jervis Ferry Terminal contains over 214 different species of indigenous plants, in a narrow 8 km strip around the tip of the Fleurieu? 50 of these plant species are classified as endangered, vulnerable, rare or threatened.

The Cape Jervis Coastal Community Group is planning to revegetate the high profile site between the township and the ferry terminal. Join us propagating and planting indigenous coastal plants, building on the efforts of other groups in the Cape Jervis region.

Main project site at Cape Jervis

Between us we can increase the number of indigenous plants growing in this harsh coastal environment while providing nature trails to allow more people to enjoy our unique native flora.

The increase in local flora will provide habitat for more birds, butterflies, reptiles, insects and mammals!

2012 - 2013 Calendar of Events

Sundays at 10 AM

2012
 Oct 14 Launch (CC)
 Dec 2 Seed sowing

2013
 Feb 3 Seed collecting (HT)
 Apr 7 Cuttings workshop
 Jun 2 Planting (HT)
 Aug 4 Planting & weeding (HT)

Venues:

CC = Cape Jervis Community Club, HT = Start of Heysen Trail
